The main goal of all reforms in the field of education is to educate spiritually mature people, improve the education system, and implement the educational process based on new pedagogical and information technologies in accordance with modern requirements. Therefore, today in the education system special attention is paid to the effective use of modern computer and information technologies. This should increase the level of knowledge and skills in this area, provide technical support to the education system, create full access to the Internet so that teachers who teach students in various disciplines in the educational process can use modern information tools. technology. Effective results can only be achieved through.

One of the main ways to improve the quality and efficiency of the education system is the use of modern information and communication technologies in the educational process, including multimedia training courses, ensuring interactive interaction between teacher and student, multimedia attraction of highly qualified personnel in the educational process. development of training courses and textbooks. We know that today it is difficult to imagine the quality and effectiveness of education without modern computer and information technologies. The National Personnel Training Program emphasizes the importance of creating modern educational technologies aimed at solving the problem of mastering the content of education at the stage of development and implementation of a new generation of didactic and information support for

the educational process. In particular, the development of methods for integration with science and production into the educational process, its implementation into practice, the individualization of theoretical and practical training and self-study, as well as the development of distance learning technology, its tools, mastery, acceleration. Among such urgent tasks is teaching students based on new pedagogical and information technologies and distance learning technologies. One of the important factors in increasing the effectiveness of learning today is the use of technical means. This, in turn, increases interest in learning the language and the quality of lessons taught, making students more active in the learning process. With the right choice of methods in the learning process, the desired result can be achieved in a short time. Constant improvement of the education system, organization of classes based on pedagogical innovations, the successful implementation of which is one of the urgent tasks facing higher educational institutions, is one of the important tasks facing professors and teachers of higher educational institutions.

Modern technology has witnessed many changes throughout the world, and these changes have improved the standard of living and well-being of people. As technology has been applied in various fields, the whole world has become a global arena and people can perform all the activities very efficiently in a matter of seconds. True, with the introduction of the latest technological innovations in the field of education, the educational sector has

also benefited more. The current generation has seen dramatic changes in the attitudes and teaching methods of modern students. When learning a language like English, they do not accept traditional language teaching methods and approaches. However, they are very interested in the latest styles, methods, and approaches to teaching English. The same situation occurs when teaching English to second or foreign-language learners. Thus, some modern English language teachers have realized the situation and are introducing new technologies in teaching, as well as applying the latest methods and approaches. To make learning English fun and engaging for students, teachers must constantly strive to embrace innovative technologies and stay up to date with current IELTS trends.

Technology has opened up a new dimension in education. In this digital era, there is no place for chalk and blackboard, instead digital, smart, or interactive boards have been installed, so the teacher's workload has been reduced and the concentration of students has been increased. As a result, students have a positive attitude towards the materials as teachers use them on computers, laptops, OHPs, mobile phones, tablets, etc. able to encourage them in a positive way using existing technologies such as. In addition, teachers use digital texts and real-world materials in their classrooms to stimulate students' interest in the subject matter. Recently, the issue of using modern technologies in the educational process has become more acute.

These are not only new technical means, but also new forms and methods of teaching, a new approach to learning. Our main goal in learning a foreign language using modern technologies is to improve the quality of teaching students a foreign language, the formation and development of their communicative culture, and ways to effectively use technology to master practical skills." We live in a world dominated by computers today. Just as technology plays an important role in business, entertainment, music, movies, and almost every aspect of our daily lives, it also plays an equally important role in education. Research has shown that 90% of students have access to some kind of computer or mobile device at school, work, or home. Thus, it is not surprising that the evolution of classrooms and teaching methods is discussed towards technology. In recent years, new technology-integrated classrooms have become popular in language learning. Blended learning, virtual classrooms, and learning management systems are examples of this new era of teaching methodology endorsed by top educators. These methods include the use of language learning technologies to increase student engagement, facilitate the teacher's role, and provide systematic and comprehensive learning for all participants. The most inspiring aspect of this technology is its ability to reach audiences around the world. Involving local teachers in language learning and enrolling students in courses taught by native speakers is what it means to ensure proper immersion.

Taking language education online opens the door for almost anyone to have access to this course and its resources.

The technology of learning languages in educational centers is the education of the present, not the future. The use of new technologies in the classroom has become a great addition to language acquisition or mastery, and along with technological support, English courses are the most effective and necessary for students who want to excel in their studies. Technology is also more useful in preparing successful teachers. In fact,

successful teachers are those who have a high level of interpersonal and interpersonal relationships and have a real opportunity to meet children where they are and truly hear what they have to say. In addition, successful teachers must have a deep understanding of the material being taught, its humility, the beloved personality and their interactions, and communicate and respect their students. In addition, successful English teachers must make the most of existing technology, classrooms, and interesting materials downloaded from the Internet for their students.
